PROFESSIONAL SUMMARY

Technical Product Manager with **7 years at Microsoft** building and scaling **platform-scale, engineering-facing software systems** — from backend data infrastructure and access control to developer tooling used by tens of thousands of engineers. Hands-on experience reasoning about **system architecture, APIs, authentication/authorization, storage, deployment, and enterprise reliability**, alongside security/compliance frameworks (SFI, GDPR, Executive Order on Cybersecurity). Comfortable partnering directly with engineering on technical tradeoffs, and translating ambiguous, technically complex problems into clear roadmaps for both **individual users and enterprise customers**. Seeking a Senior/Technical PM role applying a builder mindset to AI-assisted software creation.

IMPACT AT A GLANCE

- **~10,000** active engineering users & ~1,000 service principals with governed data access
- **100M+** work items ingested daily across 24,000+ projects — backend data platform at enterprise scale
- **7+** downstream system integrations (ServiceTree, Watson, Fleet Inventory, Liquid, CredScan, OneBranch, Accessibility Insights)
- **10** secure data clusters managed, including highly sensitive/regulated datasets

WORK EXPERIENCE

Product Manager II — Service Owner
2022 – Present

Microsoft — CoreAI, CloudMine

CloudMine is Microsoft's enterprise data pipeline and store for engineering artifacts (work items, builds, commits, source code) — the backend data foundation for AI model training, engineering productivity analysis, and internal compliance/security.

- Own end-to-end product and technical strategy for CloudMine's **data architecture, storage, and API layer**, scaling the platform to process **6.66M events daily** across 24,357 ADO projects and 258,224 repositories.
- Designed and led implementation of a **tiered permissions/data-access model** (Enterprise Visible / Private / All) for enterprise readiness — partnering with Legal, Privacy, and Security to define access requirements for confidential and highly confidential datasets.
- Built and shipped a **full-stack internal web application** for row-level **managed-identity (MSI) authentication and access**, closing a critical gap in Microsoft's identity/authorization landscape with justification workflows, approvals, and automated renewal/expiry.
- Redesigned the platform's **ingestion architecture** (hybrid push-pull) to reduce API token consumption, eliminate rate-limit throttling, and improve data freshness from **hours to minutes** — a direct reliability and scalability win.
- Launched the **1ES Data Surface**, a reusable, self-serve developer platform of shared data functions/APIs — reducing engineering query-writing time and improving developer experience across teams.

Product Manager I
2020 – 2022

Microsoft — 1ES Data Insights, MerlinBot

MerlinBot is Microsoft's internal developer platform with 40+ engineering bot extensions, processing ~600K PRs, ~500K builds, and ~2M pipeline runs daily.

- Shipped an **ML-based static analysis extension** — an early AI-assisted software quality tool — that detected 2,600+ defects across 5 repositories in 4 months, cutting the Windows team's defect fix cycle from **30 days to 2 hours** (59% fix rate).
- Consolidated developer tooling by merging FabricBot into MerlinBot, **saving ~12 engineering hours/month and $15,000+ annually** in resource costs — improving platform reliability and reducing operational overhead.
- Led strategy and adoption for MerlinBot's platform expansion, directly improving code quality and developer productivity across Microsoft engineering.

Product Manager I
2019 – 2020

Microsoft — Azure DevOps, Boards

- Shipped dark mode for Azure DevOps Boards to meet WCAG accessibility standards, adopted by **5.1 million monthly active users** — with strong positive feedback from visually impaired users.
- Owned the NPS metric for Boards; analyzed customer feedback to surface root causes and directly inform backlog prioritization.

Intern — Project and Operations
May 2018 – Aug 2018

Nova Bus, Volvo Group

- Built a KPI dashboard in MS Visual Basic/Macros for the Purchasing & Operations Department, improving buyer performance and productivity by ~60%.

ADDITIONAL LEADERSHIP & BUILDING

Board Member, Ethos Lab **2022 – Present**

Ethos Lab, Vancouver — an innovation lab based in Vancouver

- Advise on product strategy and platform development for Ethos Lab's broader innovation-lab initiatives.
- Partnered with Ethos Lab's founding team to launch the **first-ever Black-A-Thon** at the Microsoft Vancouver office — an AI-focused hackathon giving Black youth hands-on access to technology and mentorship — and built and led a **team of volunteers drawn from the Microsoft engineering community** to run it.
- Grew the program from a pilot of **25 kids to 2,000+ participants**, and helped secure **$500K+ in brand sponsorship** from partners including **Sony (EA Sports), NBA Canada, and Microsoft**, among others.
- Evolved the curriculum toward applied AI: at the most recent Black-A-Thon, participants learned and used AI tools to creatively reimagine Vancouver's historic, demolished Hogan's Alley neighborhood. (ethoslab.ca/black-a-thon)

Chair, Africans at Microsoft (Employee Resource Group) **2021 – 2023**

- Led a global community of **2,000+ African employees** spanning Vancouver, Seattle, and Lagos — setting strategy and programming for one of Microsoft's Employee Resource Groups.
- Served as a consulting voice to the business on **employee hiring and talent strategy on the African continent**, and hosted executive fireside chats on Microsoft's investment and presence in Africa.
- Raised $41,000 for education-focused nonprofits in Africa; hosted career events and a girls-in-STEM mentorship program with SheCodeAfrica.

Head of Product (Volunteer) **2020 – Present**

African Impact Initiative (Non-profit)

- Leading product development for a platform serving the African Impact Challenge incubator; engaged 4,000+ founders across 6 African countries — 28 funded pre-seed, 8 with follow-on funding.

EDUCATION

Bachelor of Engineering — Electrical and Software

McGill University, QC, Canada — CGPA: 3.34/4.0

- Relevant coursework: Data Structures and Algorithms, Foundations of Programming, Artificial Intelligence, Design and Testing of Software Systems.
- Extracurricular: VP Sustainability (Reboot McGill); Business Team Strategy Lead (McGill Robotics); McGill intramural soccer captain.

TECHNICAL SKILLS

- **Software & Systems:** APIs, application architecture, authentication/authorization (MSI), storage & data pipeline design, deployment workflows, reliability/scalability, Python, Java, JavaScript, SQL, Git.
- **AI & Platform:** Prompt engineering, AI product integration, ML-based tooling, access governance, security & privacy compliance.
- **Data & Analytics:** Kusto (KQL), SQL, Oracle, Amplitude, Power BI, Grafana, Tableau.
- **PM Tools:** Azure DevOps Boards, Jira, Trello.

CERTIFICATIONS

- Certified Scrum Product Owner
- Certified Scrum Master
- SAFE Product Owner (in progress)
